Sun Temperature Sender

The classic Sun “Blueline” water temperature gauges used a unique sender (sensor) that is no longer available. The gauges, nominally 2-5/8” diameter, were model number WT-260. The original sender part number is WTS-125, WTS-375 or WTS-500.

We are able to source a very high-quality sender that is compatible with these gauges. It is the TechnoVersions S-WT-260-S. This sender comes with 1/8” NPT threads. If you have a larger sender hole in your manifold, such as 1/4” or 3/8” NPT, you will need to use a bushing for installation (not included).

This sender is stainless steel, and has two wires rather than a single post. One of the wires connects to the gauge, and the other to ground. Either wire can be used interchangeably for ground or connection to the gauge. Wire size should be 24 AWG or larger.

Specifications	
TechnoVersions Model number	S-WT-260-S (gauge not included)
Body threads	1/8"-27 NPT
Wrench size	12mm
Wire	24 AWG, approx. 19" long, Teflon insulated
Housing material	304 SS
Length of probe beyond threads	approximately 5/8"
Diameter of probe beyond threads	approximately 0.2"
